

# MAJOR ENERGY OPERATOR

*Management System  
Improvement Project*

## CHALLENGE

Following a recent acquisition, the client had a need to fully integrate new operating assets and associated processes into the existing management system.

The client did not have enough resource within the organisation to fully support this project.

## SOLUTION

01. Quensh worked closely and in cooperation with the client HSEQ Department to provide a team of experienced resources to review and update the existing management system and ensure the new operating assets were fully integrated accordingly.

The following services were provided:

- Fully outsourced managed project
- Full review of existing documentation across HSEQ, Operational and Engineering functions
- Identification of recommendations to simplify and make the system manageable and in turn the creation of a Project Improvement Plan
- Implementation and Delivery of the Project Improvement Plan

# MAJOR ENERGY OPERATOR

## RESULTS & BENEFITS

01. The delivery of a fully integrated management system in accordance with the clients' requirements.

---

02. This in turn allowed the client and core HSEQ personnel to focus on their day to day HSEQ operations and deliverables.

---

03. Quensh also ensured service continuation to cover downtime, sickness or annual leave.

---

04. The client was able to scale up & down the HSEQ support in line with their operational demands.

---

05. Ultimately this approach provided cost saving to the client without the need to recruit their own personnel and save on overhead costs (eg - outsourcing experienced HSEQ personnel to manage and deliver the project).
